PROJECT

I have completed six month course junior software developer.

EMPLOYEE MANAGEMENT SYSTEM:

The main objective of an employee management system is to retrieve data from a large database and display it according to user requirements. To retrieve this data, we use JDBC (Java Database Connectivity) to connect the Java and MySQL databases. In this project, we used DML to write queries and create a database using MySQL. We also wrote all of the business logic using object-oriented programming concepts within the Eclipse IDE.

TELEPHONE DIRECTORY:

The main objective is to retrieve data from a huge database and display the details according to the user's requirements. We used CRUD (create, read, update, delete) operations to manage the database and connected the MySQL database to the Java programming language using JDBC (Java Database Connectivity). We also employed a three-tier architecture.

PORTFOLIO:

Designed and developed a personal portfolio website using HTML and CSS, showcasing my skills and experience. Utilized responsive design techniques to ensure compatibility with various devices and browsers." This describes the main features and functionality of your portfolio, as well as the technologies you used to build it. You could also mention any additional features or functionality that you implemented, such as forms, animations, or interactive elements.

E.COMMERCE:

This project main objective is the user can buy any electronics products as per user requirements .

The features , I have used in this web application like navbar , carousal , grid , cards , footers from bootstrap.
